

Autism Advisory and Support Service

"Empowering children with autism
and their families through knowledge & support"

Physiotherapy

Gross motor skill (co-ordination) challenges can contribute to children being hyperactive, inattentive and disorganised. They can interfere with a child's ability to learn at school and to play and socialise with other children.

Kids with these challenges may avoid tasks or games that require movement skills and may have difficulty being independent in activities of daily living. They are also more susceptible to injury.

The Autism Advisory and Support Service's Physiotherapist can assess your child's gross motor skills and provide therapy to improve his/her coordination, strength, running ability and play skills. AASS Physiotherapy sessions also intentionally promote the development of social skills.

**For more information or to make an appointment with one of our team,
please call (02)9601 2844.**
